JONES CATALOG

OF

Select Strawberry Plants

J. W. JONES & SON CO.

ALLEN, MARYLAND

1930

A Basket of Aroma
What We Will Agree to Do

We sell by catalog only, and to everyone at the same price, filling all orders with the same high-grade stock. Strawberry plants frequently can be shipped during warm spells in winter, and after March 1st in unlimited quantities. From then until May 1st we are busy every day filling orders for customers. After May 1st we can fill a limited number of orders, but at purchaser's risk always.

We Ship Out Only Fresh-dug Plants and will replace free of charge anything that reaches you in bad order, provided the transportation companies have given the shipment reasonable dispatch. If it has been unreasonably long on the way, the purchaser should examine it and if spoiled decline to receive it and make claim on the express company.

Our Terms are Cash with Order, and please remember when you are sending your money in advance that every one else is doing exactly the same thing. We will, of course, book orders and hold them a reasonable length of time awaiting remittance.

Remit by bank draft, check, post-office or express money order or registered letter. Your personal check preferred.

As to Our Responsibility, we refer you to the Eastern Shore Trust Co. of Salisbury, Maryland. In writing them please inclose stamp for reply.

J. W. JONES & SON COMPANY.
WE SHOULD like to have the pleasure of personally meeting all our friends, but since we cannot, the next best thing is to greet you with our little salesman for 1930.

Nineteen Thirty means that just thirty of them have gone on their rounds. We believe the statements that “he” makes are true and that the goods he offers are as represented. Fair profits for berry growers last year were, as a rule, obtained. In some localities very handsome ones. We believe that 1931 will see a berry shortage, and that those who plant what they can properly care for will receive a very handsome profit.

Order good plants from “Maryland’s famous Eastern Shore”; get them as early as it is possible to use them, care for them properly, at picking time grade them carefully and we feel confident that you will not be disappointed in results.

J. W. JONES & SON COMPANY.
There is really a good deal of pleasure in growing beautiful strawberries. Still the man who really grows any quantity is interested in the possible profit.

Now we wish to say that it is our honest belief that strawberries will continue to return good profits for a long time. Of course there will be “off years.” But on the whole we believe that strawberries are the safest of all farm crops so far as the prospect for profit is concerned, and for the following reasons:

1. Farm labor has become so scarce that the big commercial grower no longer exists. Strawberry growing has passed permanently into the hands of the man who cares for only a few acres. They will not overdo it to any great extent, because they cannot.

2. They are the first fruit available in spring, and people are eager for something fresh. Everywhere people are waiting for “berry season” to come.

3. The income of city workers is on the average constantly increasing. He will buy more largely of the luxuries of life. Strawberries in season, will always be on his list.

4. Improved methods of distribution, and they are constantly being further improved, is giving to berries an ever widening market. The quantity consumed increases annually and will continue to do so.

5. The poor fruit is more and more being taken by canners and juice factories... This relieves the market of congestion and helps the sale of better fruit.
WHAT TO PLANT

One of the questions we are persistently asked is “what kind shall I plant?” Now we do not have to tell you that it is a most difficult question to answer. It is most difficult to decide for ourselves. If we knew what the conditions would be at ripening time we could formulate opinions instantly, but shall we have late frost, will it be wet or dry, excessively warm or cool. These are questions that have no previous answer, and so they provide always the element of uncertainty in the situation. However there are certain fundamental facts in every matter of this kind and to these we wish to call your attention.

1. If you have a home market you want quality and appearance. Then for early plant, Heflin; medium early, Premier; medium, Big Joe or Lupton; late, Gandy, Aroma or Big Late.

2. If you ship to fairly near market, you want quantity and appearance, because in quantity you get your profit. We still advise Heflin and Premier, then Big Joe and Sample or Lupton, Gandy and Big Late.

3. If appearance alone is your chief aim, plant Chesapeake and Lupton and even here Premier and Big Late might also find a place.

4. If quality is the biggest thing, plant Wm. Belt Gibson or Parsons.

5. If we were going to select a list of varieties to cover the season and to be planted on the greatest variety of soils and in any climate, we would say: for early, Heflin; second early, Premier; midseason, Aroma, Lupton, Big Joe and Sample; for late, Gandy or Big Late. Out of an experience of a lifetime in berry growing we can truthfully say they cannot be beaten for general use. Probably you would not want them all, but you are safe in planting any of them. That is as safe as one can ever be on so risky a venture as any branch of agriculture is.

We Guarantee everything that we sell true to name, and believe 99 per cent of everything that we have ever shipped has proved so. However, sometimes in spite of the utmost precautions, mistakes do occur, and we will, upon proper proof, replace anything that proves untrue to label or refund the purchase price.

Strawberry Plants are packed in slatted crates, with plenty of damp moss, and will carry as far as from any concern in the United States.
PLANTING SUGGESTIONS

Every year we have numberless requests for information on the best method of growing Strawberries. Of course, every one recognizes that this is a very difficult question to answer, as conditions vary so greatly in different localities and on different soils. Nine-tenths of all berries grown, or even more, are grown by the matted-row system; that is, to leave about all the runners on the parent plants to take root and make a wide row, leaving enough room in the alley between the rows for the convenience of the pickers.

The fundamental element of success in growing any crop is the selection of a soil. Strawberries need a strong, well-drained location, but at the same time, the land should be as retentive of moisture as it is possible to have it. Strawberries suffer more from dry weather than from any other cause and therefore a moist soil always contributes to success. Grow cowpeas or soybeans on land the previous year to planting strawberries if it is possible; where they are not practicable, sow rye in the early fall and plow under early the next spring, as strawberries need a soil full of humus. It holds the moisture and makes them grow and bear much better.

We always plow in the fall, but when that cannot be done plow as early in the spring as possible. This is important, as berry plants need a well-compacted soil. Settling during the winter puts the soil in ideal condition for spring planting.

Make your rows 4 to 4½ feet apart and set plants from 15 inches to 3 feet apart in the rows, depending on the variety. Chesapeake, making but few plants, should be placed about 15 inches. Heflin, a prolific plant-maker, will get too thick quite often if set 3 feet. Big Joe, Sample and most midseason kinds will usually make a proper bed if planted 2 feet apart. Gandy, Lupton and Big Late 2 to 2½ feet. We run our furrows with a double row marker, sow fertilizer down the furrow at the rate of 400 to 500 lbs. to the acre, and then make a sharp list with a two-horse machine, striking down this bed nearly level of the field with a hoe or small drag and you are ready to set your plants.
We desire to warn our friends against the too heavy application of commercial fertilizers to young Strawberry plants. It is dangerous in the extreme. Many plants have been injured and often killed outright, but 400 or 500 pounds will not hurt them, provided it is well scattered and then cultivated in before setting the plants. We recommend raw bone meal as the best for berries.

There are many methods of setting the plants. No particular method has advantage over another except in the saving of labor. The important thing is to get your plants in the ground the same depth as they grew in the original bed, and to pack the dirt firmly around the roots. This done, there is little choice as to the method of doing it. The cultivation is always important and should be started as soon as the planting is finished. If one will take the trouble to destroy all grass and weeds the year previous on land to be planted to strawberries, it will be found to pay handsomely, as the seeds thus destroyed will not be in your berry-beds to plague the grower and run up the cost of hoeing. Keep them clean until frost, hoe shallow so as not to disturb the roots, and success is assured.

**SOMETHING ABOUT SOILS**

Every berry grower of extensive experience has found that frequently his berry plants refuse to grow. As a rule he has erroneously attributed this to disease in the plants, especially if they were purchased, rather than propagated by himself. Experiments have convinced many growers that the real trouble is in the soil itself, that there are certain places where it is practically impossible to grow berries successfully. Whether this refusal on the part of berry plants to grow in these given places is due to the lack of a certain bacteria or plant food, or whether the soils contain some poison that kills the plant is a moot question as yet, and one that a number of State Experiment Stations are now at work on.

Our life-long experience in growing Strawberries has taught us, however, that a number of kinds are practically immune from trouble on any soil, while there are others that have to be planted on favorable soils or they refuse to grow. In order that our friends may have the benefit of our experience we propose to call attention to those kinds that refuse to grow in some places, and also to the kinds which will grow anywhere.
We have found Chesapeake particularly susceptible to soil poison, Klondyke, Parsons' Beauty and Gandy also display a weakness in this direction. Big Joe, on the contrary, will grow anywhere and hold up the crop—while Big Late, Sample, McAlpine, Premier, Aroma and Heflin are ideal, scarcely ever showing any weakness. Wm. Belt and Dunlap are medium, not doing so well on all soils as Sample and Aroma, but are much surer everywhere than Chesapeake and the others named in that class.

Among everbearers Progressive and Champion are vigorous and sure, though Mastodan is quite vigorous as a rule.

THE BIG FOUR

On pages 9, 10, 11 and 12 of this catalogue there are descriptions of what we believe to be the best varieties in existence today; Premier, Chesapeake, Lupton and Big Joe.

They possess all the elements that make for success: vigor of growth, productivity, stamina at fruiting time, freedom from disease, and what is most important, the handsome appearance that commands the highest price always.

Of the four Premier is the most popular, perhaps deservedly so. It is the earliest, the most productive and the surest success under all conditions of soil and climate.

We feel that our friends make a mistake when they plant a long list of varieties. Differing widely in general appearance, different varieties do not crate up well together, pickers are not satisfied to gather carefully the smaller and less productive kinds. Many of them are inferior in some particular, hence we unhesitatingly recommend these four of tested merit and unquestioned superiority. Of course, if it has been demonstrated that for your special situation of either soil or market that other kinds are best, we will be glad to fill your order.

But, we feel quite confident that with these four varieties the vast majority of growers will be certain of the largest possible profit. Hence we place them at the head of the procession, feeling sure that they will not be displaced.

"YOU CAN PAY MORE BUT YOU CANNOT BUY BETTER"
A Basket of Big Joe

**BIG JOE.** One of, if not the very best of the perfect blooming kinds. In size it is the equal of anything we have ever seen, taking the entire crop right through, as the last berries are almost as large as the first, and this in spite of the fact that it bears very heavily. It ripens midseason, along with Aroma and Sample, comes on rapidly and ripens all over at once, making it easy to pick. The shipping quality is good. It is not so firm as Aroma or Gandy but it has shipped well from this section for a number of years and has brought high prices. We have known of many instances where a whole crop of Big Joe brought the highest prices of any variety being loaded. We especially recommend it for the garden on account of its handsome appearance and excellent quality.

It is also a particularly strong and vigorous grower, the equal of any. We feel sure that you will find that it meets every possible requirement of the market berry grower, being productive, a strong and healthy grower, and has a perfect bloom, so that it does not require a pollenizer. In fact, we think it can be used as a pollenizer for any of the midseason varieties.
A Basket of Premier

PREMIER. Of all berries ever introduced Premier seems to be more nearly ideal than any we have ever grown. It is beyond all question the best early variety ever offered the American public. For several years now in spite of manifold adverse conditions it has produced enormous crops and they have brought the highest market price always. In other years when other kinds were failing on account of lack of moisture Premier was still on the job. It is a good grower, making plenty of stocky, heavily rooted plants, but not inclined to get too thick, you always have a bed that is just about right. It is tremendously productive of good sized berries, bearing a strong resemblance to Haverland, and no matter how many kinds there are in the market Premier always tops them all in price. The most remarkable feature is the fact that it keeps so well, for three or four days after picking it holds up in texture and appearance to a most remarkable degree. It does not matter where you may live we can recommend Premier, as reports from all sections agree in placing it at the head of the list and our prediction is that it will remain there a long time. If in doubt plant Premier, you will never be disappointed.
CHESAPEAKE. The most valuable of all of W. F. Allen's introductions. For many years there has been a place for a fancy late berry of good shipping qualities and Chesapeake has filled it. We have never seen any that was of more beautiful appearance, large even in shape and uniform in size, it seems to have reached perfection so far as market qualities are concerned. Ripens a little earlier than Gandy, but holds out about as long, and in most localities is vastly more productive, though Gandy may occasionally, with ideal soil, bear quite as many berries as Chesapeake. The great superiority that it has over nearly all others is its remarkable selling qualities, for we have positively known of sales where it brought twice as much per quart as other standard varieties of its season. It may be that there will be an overproduction of poor berries, but we doubt if there will ever be too many of such high quality and handsome berries as Chesapeake. Its only weakness is a difficulty in getting a bed of the plants. If you can grow it plant it, a handsome profit is reasonably sure.
Lupton

LUPTON. To the man who wishes to grow really fancy berries we unhesitatingly recommend the Lupton. It is every whit as handsome as the justly famous Chesapeake, and is so much superior to that kind in vigor of plant growth that we urge all who have a fancy trade to supply to at least give Lupton a trial. The fruit is very firm and extremely handsome, in fact we do not know of any kind in existence today that shows up to better advantage when crated, and it is as productive as any kind we have ever grown that was a real fancy berry. It is a perfect flowering kind and is suitable for pollination purposes if needed, ripening early midseason. It is not a rampant plant maker, but has never failed to make a good bed for us and the plants are heavily rooted and full of vigor. We say again if you want a strictly fancy berry plant Lupton, but we do not advise that it be planted on any but a good, rich soil. We have an unusually fine stock of plants for this year and feel sure that those who plant these will pick a handsome crop of berries in 1931. In this immediate vicinity it has about supplanted the long time popular Big Joe, chiefly because it suffers less frost damage.
AROMA. There are a few Strawberry varieties that “run out” quickly, there are a few others that “hold their own” for a long time, but Aroma seems to be one that improves with age. It has really been growing steadily better here ever since we first grew it. It ripens with the regular midseason kinds, such as Big Joe and Sample. It is every bit as good a seller as the Gandy, being quite as large, firm and handsome as that well-known standard of shipping excellence; on any kind of dry soil will bear twice the quantity of berries as Gandy. In fact we do not know of any kind that holds up better on dry, thin soils than Aroma. It is also a good sure grower in nearly every locality and on all kinds and conditions of soils, for while the plants are not so large as many others, for toughness and vigor it has no superior. But the biggest thing in its favor is its selling qualities. On all the Middle West markets Aroma is always quoted at from 25 cents to one dollar per crate higher than average varieties, which in a season of over-production means a lot. Our own experience leads us to recommend it as a good pollenizer, though it has not usually been recommended for that purpose. We have found it better than Chesapeake, for it is much more vigorous in growth. Certainly no grower can make a mistake in planting Aroma. Even now many growers on the famous Del-Mar-Va peninsula are just learning the real worth of this great berry and are planting it.

BIG LATE. This is one of the best growers; makes a heavy bed of large stocky plants, with long fibrous roots that go down for the moisture; and with a light color somewhat resembling Haverland. The quality is among the very best; and for that reason it should sell well, for fruit growers have to recognize that the consuming public is constantly growing more critical of the quality of the fruit it buys. It is also very nearly perfectly rust proof; making it valuable during a wet season. The berries average large in size; are a bright glossy red with prominent seeds, and almost all are perfect in shape. It has a full green cap that adds to its attractiveness when crated. It is one of our best shippers and should therefore become valuable for either home or distant market. It is medium late and therefore cannot take the place of Gandy if you want a very late kind, but it is a great berry of its season.

BURGESS. From Alabama and a seedling of Aroma. It is the claim of the originator that it is superior to that justly famous variety. If that be true; it is safe to say that we shall hear of Burgess for a long time to come. It is a good grower and we advise all our friends to give it a trial. We believe that this is destined to become very popular. The berries are very beautiful and firm and it is productive.

DUNLAP. Makes more plants than any other we grow, and if allowed to get too thick the berries are generally small, but when properly thinned, you find it hard to get a berry that will produce more nice market berries than Dunlap. The fruit is average in size and perfect in shape and ships well, but the great point with Dunlap is that it may be depended upon to grow well and bear well everywhere and every time, even during a record-breaking drought. Ripens with the very earliest midseason berries and matures its crop rapidly. Not as popular as it once was.
FRUITLAND. The plants make a good bed of tall, vigorous and hardy plants. Berries ripen about the same time as Premier. They grow on rather long stems and are shaped somewhat like the Klondyke, although are much larger, but are as firm and as good a shipper as the Klondyke.

GANDY. For thirty years the leading late kind and by many still considered the best. The only trouble is, that on dry soil or in a very dry season it cannot be depended on to bear well. Of extraordinary shipping and and selling qualities, it is still the leading market berry for late in many large berry producing centers. A free plant maker and good grower generally, yet sometimes failing in vigor. Its remarkable firmness makes it keep on the vines longer than almost any kind we know, and it never fails to bring the price. For late it is the best. Many kinds have challenged its supremacy but none as yet dislodged it.

GIBSON. Not especially recommended for a shipping berry but fine for local market or home use. Berries large, beautiful dark red color, vigorous grower and very productive. Bears through a long season and very popular for canning.
These are Haverlands

HAVERLAND. It is a heavy yielder, and can be depended upon to bring up a crop every season—hot or cold, wet or dry. If you have any berries at all, you are sure to have Haverland, it is one of the toughest and strongest growers that there is on the list. The berries are fair size, long-conical, firm and a good shipper, and it never rusts. There have been times when many other kinds were "all in" from drought and heat, Haverland was picking a fine crop. Not so popular as it once was, but a wonderful berry in many places still though Premier has about displaced it in many, if not most localities.
KLONDYKE

IMPROVED HEFLIN. We have been growing berries for a half century and in that time have fruited hundreds of different kinds; but we unhesitatingly say that Heflin is the best extra early we have ever seen. For years and years it has been the hope and dream of berry growers to find an extra early that would produce a full crop of good size berries. Heflin does all of this. In fact we do not believe that there is any kind; not even making an exception of the now famous Premier; that will produce more quarts per acre than Heflin. It grows with great vigor on any type of soil and will always set a full crop regardless of whether the land on which it is grown is rich or poor. In fact we have never seen any that does so well on thin soils as it does. At the same time it responds recklessly to good treatment.

It possesses the following distinct advantages:
1. It is a true extra-early; being at least three days ahead of Premier and a full week ahead of the midseason kinds such as Big Joe and Sample.
2. It not only ripens early; but the bulk of the crop comes on rapidly; giving you the advantage of an early market.
3. It is as large and as handsome as almost any midseason variety.
4. It is free from any kind of disease and possesses unusual vigor of growth.
5. It has a perfect blossom.

If you want an early berry plant Heflin, it is the best we have ever seen. Its only weaknesses is its lack of firmness and tendency to grow too thick.

KLONDYKE. Found valuable, not for the quantity of fruit it produces but from the fact that what it bears is of such fine appearance and shipping quality that it will command the top of the market always. It has a strong, staminate blossom which
makes it satisfactory as a pollenizer. It is not tremendously productive, but bears a very fair crop, and the berries are remarkably uniform in size, shape and appearance, and of extra fine quality. It begins to ripen about three days after the earliest kinds and continues in bearing through a long season.

McALPIN. One of the greatest growers we have ever seen, doing well on light poor soil, in fact will grow anywhere. It is a fine shipper and brings the top of the market. Very productive of medium to large, scarlet colored, perfectly formed berries and unsurpassed in quality. We recommend McAlpin to all who want a vigorous growing productive and fine looking strawberry. It is a good one, medium late. You can plant it with confidence.

PARSONS' BEAUTY. This is a tremendously productive berry of the Haverland and Dunlap type, and while it does not do its best every season, still we know it to be one of the best for size and a crop that can be planted. We do not recommend it, however, except for a moist, swampy soil of fair fertility; but when given that, it is one of the greatest berries ever grown, provided the season is not too wet at picking time. If there is much rain when they are ripening they are sure to rot badly.

PAUL JONES. One of the most productive varieties on the entire list. On all soils, light or heavy, rich or poor, it brings the crop. It is a good, vigorous grower, making just enough plants. It has an imperfect blossom and should be planted with Big Joe, Aroma or Premier. Berries large, good appearance and ship well. If you want a good crop plant Paul Jones.

SAMPLE. Like the Aroma, this is better than when we first grew it. It used to rust some at picking time quite often, but for a number of years now it has been one of the healthiest and strongest growers we have. It is a beautiful grower, making just enough plants for an ideal fruiting bed; and for productiveness it is not excelled by anything. It is not likely that there is another sort that will bear as many quarts of berries as Sample. They are of a beautiful bright red, firm enough to ship any reasonable distance, and the quality and appearance are good enough to bring top prices always. The season of ripening is medium, about the same as Aroma or Big Joe, and there is none that holds up better in size to the end of the season. Anyone wanting to plant main crop berries would do well to include Sample in their list. It is reliable, especially in Pennsylvania and the Middle West. Big Joe and Sample make a great pair. Plant them together.

Send us $1.10 and we will send postpaid to any post office in the U.S., 100 plants of Progressive, the great Fall Bearing Strawberry.
SUSSEX. This comes from Delaware, the state that has sent out many fine new varieties in time past. Sussex is named for the county from which it came. In plant growth it resembles very much indeed the old Parsons’ Beauty; and we are wondering if the berries are also going to resemble them. We have not fruited it and can only recommend that you give it a trial. This was last year's description. We believe it is Parsons’ Beauty.

WM. BELT. This has for many years been the standard of excellence so far as quality goes, and we do not know of any as yet that has taken its place. It is a fair grower, but sometimes rusts badly in late summer, and we do not get a good bed. The flavor is so delicious that there is always a demand for more when it has once been placed on the market. It is moderately productive and ripens medium late. If you want quality Wm. Belt may be planted with confidence.
PROGRESSIVE. For many years there has been a persistent effort on the part of berry-breeders to secure a summer bearing Strawberry that was really worth while.

We consider Progressive the best for general purpose, for the reason that it will bear freely the same year that it is planted on the current-year plants. That is to say, the runners that take root in May and June will make a profusion of berries in late August and September. If berries are wanted earlier, the best way is to set the plants close together, say about 12 inches in the row and the rows 2 1/2 to 3 feet apart, and keep all runners and blossoms cut off until about the 15th of June, when your plants will have made a good start. By the 15th of July you will have on these spring set plants a profusion of berries. Better sized berries may be had by this method than by the matted row, but there will not be so many of them. In quality they are in every respect the equal of Wm. Belt or Chesapeake, have good color and shape, and if rain is fairly plentiful, they attain a size about equal to Dunlap. The plant is vigorous and healthy in every respect and makes runners in great profusion. If the early summer is favorable, and you use the matted row system, by August 1st you will have a bed sufficiently wide to produce a good picking of berries three times a week at least. Under ordinary conditions the berries are firm enough to be shipped several hundred miles, and as they come at a time when Strawberries are a luxury the grower is reasonably sure of getting a big price.
CHAMPION. Since the introduction of Progressive a few years ago there has been many attempts to secure an everbearing strawberry that would eclipse it. In that very laudable attempt Progressive has been renamed more than once. In Champion we really think that this happened once more. However it does seem to have grown some what better this year than Progressive; but as they are on a same what different type of soil that may account for it. In any event you need not hesitate to buy Champion, as we are sure you will have a good vigorous type of Progressive.

MASTODON. An everbearer that has real merit. Many have been sought to surpass the well known Progressive, but so far all have failed. We believe that Mastodon is the one kind that will eventually supplant all other everbearers. It is a very vigorous grower; the berries are as large as many regular season kinds at their best. In productivity it surpasses any everbearer we have ever seen. In fact we do not hesitate to say that we think it stands alone in the everbearing field. The trouble to date is that the stock of plants is so small that the price remains very high. You can afford to give it a trial at least, and we feel sure you will find it superior to any Fall-bearer you have ever seen.

About Stock By Mail

The parcel-post system does not make a lower rate on nursery stock than the regular merchandise rate; it is therefore prohibitive in cost except for short distances. For instance, the rate in the 6th zone is 8 cts. per pound, which is too high, unless one is remote from express office, or wants only a small package. We can mail strawberry plants in almost any quantity by making a number of different packages of the order, as follows:

On 12 and 25 plants: add 6 cts. for zones 1, 2, 3 and 4 and 8 cts. for zones 5, 6 and 7. Postage must be enclosed in your order in addition to the price.

On 50 plants: for zones 1, 2 and 3, add 8 cts.; for zone 4, 11 cts.; for zone 5, 14 cts.; for zone 6, 17 cts.

On 100 plants: for zones 1, 2 and 3, add 10 cts.; for zone 4, 19 cts.; for zone 5, 25 cts.; for zone 6, 33 cts.

On 500 plants: for zones 1 and 2, add 24 cts.; for zone 3, 44 cts.; for zone 4, 83 cts.; for zone 5, $1.22; for zone 6, $1.61.

</table>

We ship out fresh dug plants and will replace free of charge anything that reaches you in bad order, provided the transportation companies have given the shipment reasonable dispatch. If it has been unreasonably long on the way, the purchaser should examine it and, if spoiled, decline to receive it and make claim on the express company. If claims are made upon receipt of the goods they will be carefully and cheerfully examined and adjusted. Any claims made fifteen days after receipt of goods will not be entertained.

DISCOUNTS

The following discounts will be allowed when cash accompanies the order:

On orders amounting to $40.00 and up to $75.00, 5%.
On orders amounting to $75.00 and up, 10%.
